framework

keep ahead of the
curve with QAFE

It happens all the time: IT projects fall behind schedule and go over budget, without delivering a final product. The reason? The ongoing evolution of the application development environment plays havoc with even the best laid plans.

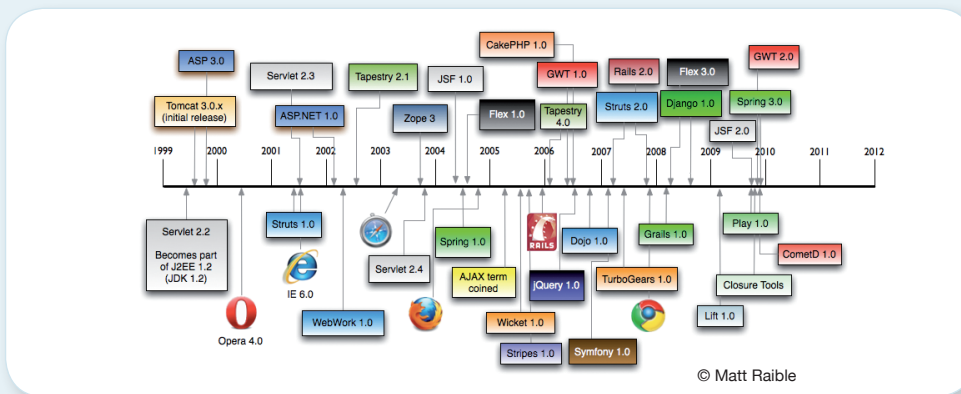

Organizations continually adjust their goals in response to changing conditions. As a result, projects get mired down trying to meet moving targets. Or worse, they are overtaken by new industry standards and need to start all over again or become legacy.

This is precisely the challenge which Qualogy set out to address with the creation of a revolutionary application development environment that is both cutting-edge as well as future-proof. The name? The Qualogy Application Framework for Enterprises, or QAFE. The benefit for you? The guarantee that your IT projects will once again successfully drive your business. They will be delivered on time and within budget.

prepare for the future

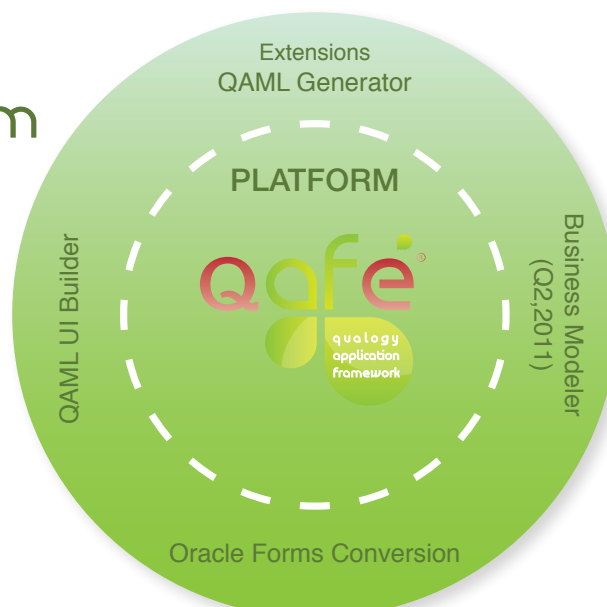

QAFE helps developers quickly turn ideas and business requirements into functional applications. Applications that run on any hardware platform, in any browser. Now and in the future. On the Internet, in particular, technological progress is racing ahead, but QAFE keeps up with future web standards as they evolve.

The benefit to organizations that opt for QAFE is obvious. QAFE seamlessly integrates with all traditional systems and databases, thereby safeguarding your investments. This applies to hardware, software, knowledge and skills.

By using QAFE to make your applications accessible by modern web technologies to large groups of users, you not only help your programmers and users, you also satisfy your stakeholders. The speed with which QAFE allows you to bring complex applications accessible online will knock your competitors out of the race.

QAFE eco-system

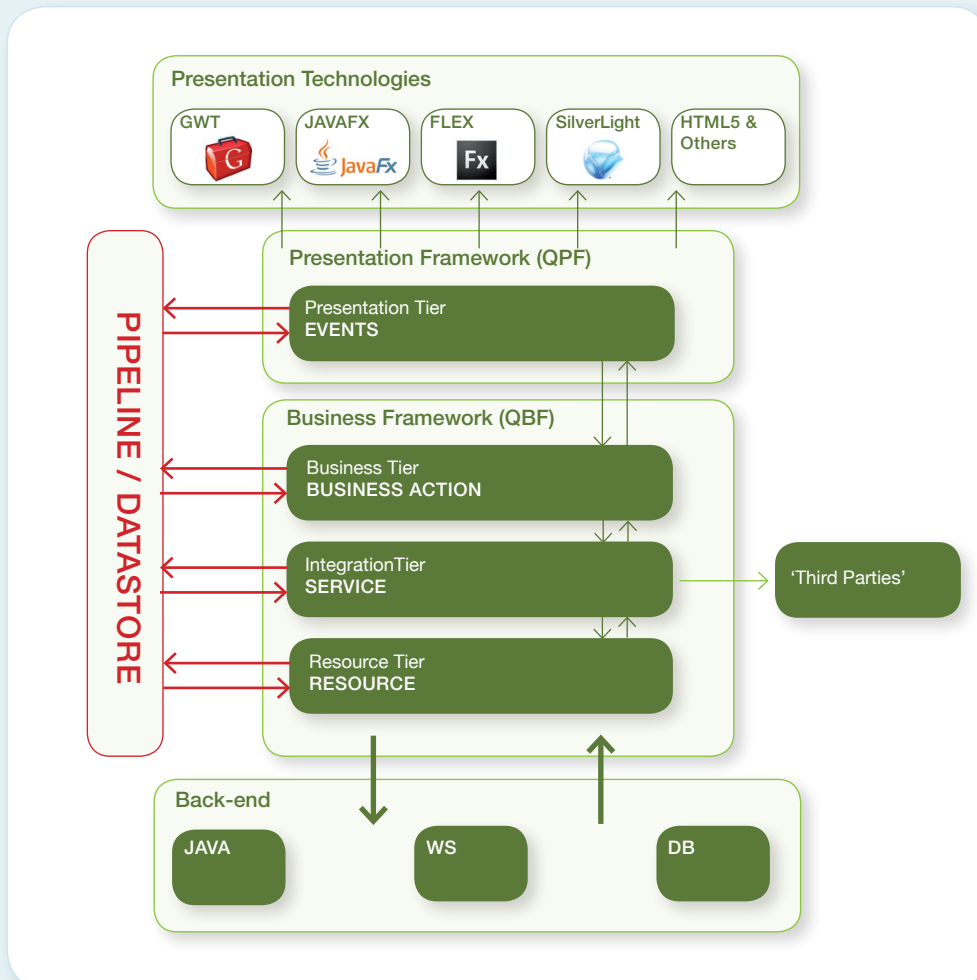

Business benefits of QAFE

● easily accessible: highly productive

Thanks to QAFE's short learning curve, developers can get to work immediately without requiring expensive training programs. Time-to-market is no longer a factor in the decision-making process. Quite the opposite: it becomes the deal-maker.

● open source

QAFE's engine will have an Open Source Community Edition. This improves transparency and encourages the user community to contribute to continuing development.

open architecture

QAFE does not require you to adapt your organization's current IT architecture. It integrates seamlessly with existing databases and systems. Naturally, it goes both ways: QAFE also offers APIs that enable you to extend its open architecture.

service oriented architecture

Over the past decade, SOA has become common in the IT world. QAFE not only embraces SOA, it is in fact the first Web 2.0 application development platform that is entirely based on it.

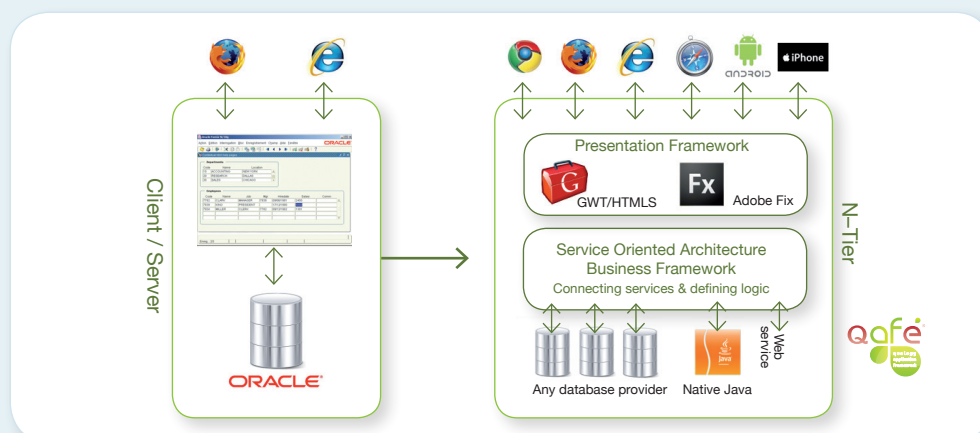

low total cost ownership (tco)

Compared to other platforms and conversion environments, QAFE offers more functionality at significantly lower licensing costs. If you combine this with savings that result from QAFE's short learning curve and the fact that the platform is future-proof, you can realize impressive savings within your organization.

high return on investment (roi)

It goes without saying that a low TCO automatically leads to greater benefits. The speed and the power of QAFE in both new as well migration projects help to cut cost. Oracle Forms conversions take one third of the normal development time, to mention just one example. Further benefits are provided by QAFE in the form of platform independency on the user side and seamless integration capabilities with existing investments in other environments.

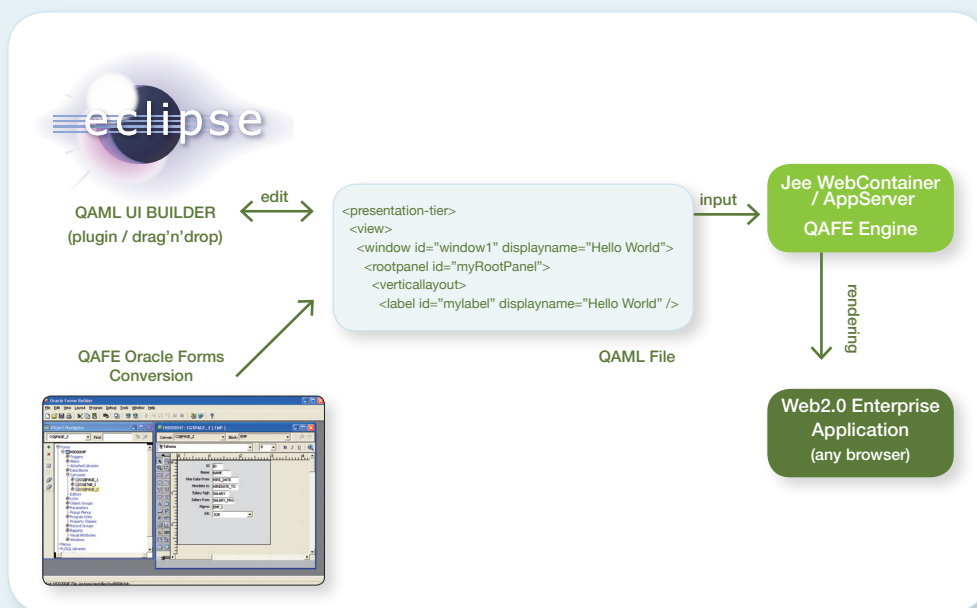

ORACLE FORMS MODERNIZATION USING QAFE

future-proof

Do you want your system to still work with all popular browsers three years from now? Do you want to make your system available as an iPhone, iPad or Android app in the near future? Until recently, developing a web application implied continuous building and rebuilding. QAFE puts an end to that. Because the presentation layer (the user interface) is kept separate from the business logic, the platform is able to make the underlying processes accessible to any web technology, be it Google Web Toolkit, Adobe Flex or (soon) HTML5. QAFE will ensure that you're perfectly in sync with a continuously evolving world.

QAFE BIRD'S EYE VIEW

Are you fed up with the ever changing variety of systems, frameworks and languages?

Do you want to build a robust and flexible bridge between your functional (business) requirements and the technological possibilities? Discover QAFE.

- Open Architecture
- Easy Development Learning Curve
- Drag and drop UI Builder (and other extensions)
- Rapid Application Development
- Handles large Data Entry Applications
- Service Oriented Architecture
- Future proof (technology independent)
- Many Supported Platforms (and support for all browsers)
- Renders to GWT, Adobe Flex, Silverlight, HTML5, etc.
- Low Maintenance
- Based on Industry Standards
- Highly Scalable
- Limitless Integration Possibilities
- Online support (Manual, Tutorials, FAQs, Walk-throughs) and offline / on site support
- Low TCO, high ROI
